

CSAL booking-to-cutoff timing

Logical ERD · entities, identifiers, attributes and relationship cardinalities

LOGICAL MODEL

NRT Booking Case has exactly 1 Timing Result; each Timing Result belongs to exactly 1 NRT Booking Case.

Timing Result selects 0 or 1 Shipment Match Profile; one Profile supports 0 to many Timing Results.

Notation: circle = zero · bar = one · crow's foot = many · UID = logical unique identifier · D = derived attribute

Source mapping (separate from ERD): NRT case ← csal_teu_performance_nrt | Shipment profile ← csal_shipment | Timing result ← csal_tcr_tiered_match_v2

Logical identifiers are derived for this analysis; physical Databricks PK/FK constraints are not confirmed.
